

# Bluescape on Microsoft Surface Hub

Unlock the Power of Visual Collaboration

**BLUESCAPE**

## Cutting-Edge Hardware

The Microsoft Surface Hub was designed for collaboration. Its large, multi-touch screen and A/V capabilities let your team's creativity flourish, and the responsive pen and inking experience means that every idea and insight can be captured at the speed of thought. The overall Surface Hub experience is so rich and immersive that the hardware itself recedes into the background enabling you and your team to focus solely on the substance of the content and the quality of the ideas.

## Innovative Collaboration Software

Bluescape's visual collaboration software is designed to enhance work anywhere, on any device. Its near-infinite virtual workspace can capture and visualize even the most complex ideas—it spurs creativity during in-room meetings and draws in remote participants. The expanse of the Bluescape workspace means that it has the capacity to contain as many projects or as much content as your needs dictate. It also means that all members of the workspace can run collaboration sessions or work independently on any section simultaneously.

Bluescape works seamlessly with Microsoft Office products, and it also integrates with other types of documents and tools with ease. Your team can work with images, drawings, text, documents, videos, web apps, and more. Anything you make can be shared and stored in one expansive digital workspace.

## A Perfect Pairing

Whether you set up Microsoft Surface Hub to run Bluescape or access it through the Microsoft Edge browser, Bluescape extends and expands upon the Microsoft Surface Hub's state-of-the-art capabilities allowing your team to view, present, and mark up any type of document or file on a rich, multi-touch display. And your remote colleagues are never left out—they can easily view and collaborate on the same files you're looking at from any device, anywhere in the world.

Imagine running a meeting where the content is front and center and all participants can interact with that content regardless of location or device. Using any conferencing solution you prefer, you and your colleagues can take notes, add comments, draw, and bring in documents, videos, web apps, and anything else that is needed. All of it captured, preserved, and stored in real time. No ideas are lost. This is how we were always meant to work—fast, seamless collaboration with colleagues, no matter how far away. With Bluescape and Microsoft Surface Hub, you can work better together in a way that feels entirely natural.
